

Create a html form like below

The image shows a web form for employee registration. It contains the following fields and controls:

- EMP Id:
- Name:
- Date of Birth:  with a calendar icon
- Address:
- Country:  with a dropdown arrow
- State:  with a dropdown arrow
- City:  with a dropdown arrow
- Date of Joining:  with a calendar icon
- Profile Pic:
- 

Create a table “employee” on “Company” database. Create column in the table according to the above form. Once user press submit button, the system will take the user input from the HTML form and insert into the table on their respective column. After successful insertion the system will show “Data successfully inserted.” All fields are required.
